*ast Voice logger – feature list

Easy Operation, login voice logger with own desktop PC or laptop, multi-language Windows based software with friendly user interface is easy for every one

Rack Mounted, standard size for rack, easy to install

Caller ID: Caller ID, universal standard caller ID receiver built-in. All incoming and outgoing call numbers are recorded.

Supports all Interfaces: Recording Interface: PSTN, analog extension, GSM, and IP.

Absolute compatibility: Compatible with all kinds of PBX

Simultaneous recording: Simultaneous recording of all telephone/ PBX lines up to 60 channels

Record limitlessly: Automatically record all conversations and keep a track of inbound and outbound interactions between agents and customers for quality assurance with our no-bar recording. All-in-One, all features on single unit, space saving, capacity upto 60 channels

Search capability: Comprehensive user-definable search capabilities like Searching records in terms of date, time and phone numbers and extension.

Data back-up capability: Save all the records, or select records to be backed up regularly. Voice Logger will analyze the records for timely back-up without worries about losing an important piece of information.

Data Base: Call records saved in DB and can be backed up.

Data Security: Access to supervisors, managers, administrators or other qualified users only with strong security features to ensure data security for the voice logs and records

**Data Encryption:** Inbuilt encrypted data storage of voice files.

Multiple format support:
Voice files can be stored in WAV, GSM etc.

Adoption of open, standards based software.
Open, standards-based software means your system will always be easily upgradeable or by adjusting a Component – you don't have to completely replace the entire system in order to upgrade.

Remote Access: Can be accessed any where from within the LAN and accessed securely from any where using public.

ARCHITECTURE : *astTECS Voice Logger with Existing EPABX
